

## Investment policy

The fund provides an opportunity to directly benefit of the performance of the North American, especially US equity market. For this reason the fund tracks the generally used Standard & Poor 500 index, often referred as S&P500, composed of the 500 biggest US company shares by market capitalization. The stocks composing the index are traded both on NYSE and the NASDAQ. The fund primary invests its assets in funds, mainly so called exchange traded funds (ETF) and/or equities and also derivative futures tracking the S&P500 stock index.

## Recommended for

For those with longer investment perspective, who would like to achieve higher returns while taking above-average risk, who in a simple way and cost efficiently would like to benefit from the performance of the world most developed economy's stock index performance, the S&P500 index composed of the biggest 500 US company shares. The recommended minimum investment period is 5 years.

## Investment activity

Equity markets closed the March trading in optimistic tone, mainly due to the stronger growth numbers and FED rate cut expectations. The leading US equity market indices rose by around 3%, but the leading sector wasn't the tech sector. The big-tech companies performed mixed, among the „Magnificent 7” stocks the shares of Apple and Tesla dropped, while the Nvidia, Microsoft, Amazon, Google and Meta gained. Because the extra crowded positioning in the big tech sector the fund hold a heavy underweighted positioning during March, which was reduced to around 5% by the end of the month. Because of geopolitical risks we have maintained an overweight in energy stocks. The energy ETF with a double digit return in March has overperformed the market.

## Glossary

**Unit Price (Net Asset Value per Unit):** shows how much of the Fund's assets are available per unit, at which value units can be purchased or redeemed. We present the unit price according to the date of preparation of the report - the last distribution day of the previous month.

**Settlement:** how long after the purchase / redemption order the financial settlement takes place. (Eg: in the case of day T + 3, the transaction will be settled according to the unit price valid on the 3rd trading day after the order is placed.)

**Investment period:** the investment period is usually divided into short, medium and long term. In the short term, they typically think for a period of about one year, in the medium term for a period of about one to three years, and in the long term for more than 5 years. The recommended minimum investment period is determined in relation to the Fund's risk (the degree of historical exchange rate fluctuations experienced).

**ISIN:** (International Securities Identification Number): a unique international identifier for securities.

**Aggregate risk indicator:** provides guidance on the risk level of this product relative to other fund products. It shows how likely this product is to cause a financial loss because of the market movements or because we cannot pay you. The indicator is based on the fluctuations in daily returns of the retrospective values modelled on the Fund's theoretical portfolio composition over the past 10 years. Lower values typically mean lower risk and lower expected returns, while towards higher values the risk and expected return increase. This classification may change over the life of the Fund.

**Net asset value:** the assets of investment funds less the value of their liabilities, the market value of the total assets managed by the fund. We present a value determined according to the date of preparation of the report - the last distribution day of the previous month.

**Portfolio:** means the composition and totality of the assets held by investment funds.

**Standard deviation:** the average deviation of the yields from the average value, ie the fluctuation of the daily yields achieved in the past, the table shows data (6 years, 1 year and 3 years) looking back from the date of reporting - the last distribution day of the previous month .

**Sharpe ratio:** the ratio of excess return over risk-free return to standard deviation, the table shows data for the 6-month, 1-year and 3-year periods from the date of reporting to the date of reporting - the last trading day of the previous month.

**Max Drawdown Indicator:** Shows the percentage of the largest rate drop since the start of the Fund compared to the highest exchange rate value achieved in the past.
